Data Sheet

Pilot Digital Console

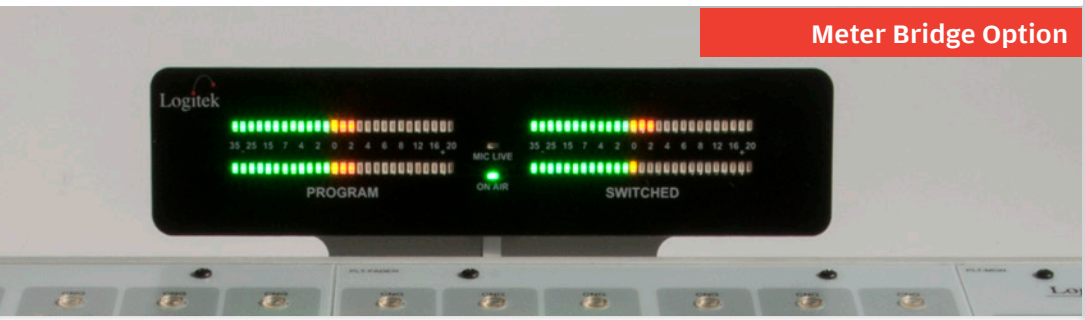
Economical, networkable, easy operation

Enjoy the benefits of an economically priced audio console with the convenience of AoIP networking. The Pilot console from Logitek, like our other consoles, is router-based and can operate with either the JetStream AoIP audio networking platform or the Audio Engine TDM router. It pairs this versatility with a simply presented user interface that is easy for novice operators to learn yet flexible enough for experienced operators to enjoy.

Available in multiples of six faders (up to 18), the Pilot offers full access to the audio sources available on the router along with easy bus selection and intuitive monitor controls.

An optional LED meter bridge provides at-a-glance monitoring of switched and program audio sources.

Meter Bridge Option



KEY FEATURES

- Configurations with 6, 12 or 18 faders
- Program plus 3 Aux mix busses
- Bright, wide angle displays with 16 character source names
- Cue switch over every fader with built-in Cue speaker
- Simple tabletop mounting
- Buckets full of mix-minus
- Efficient 20 watt power consumption

CONTROL VERSATILITY

- Change button over every fader with centralized selection knob
- Quick-route button for selection of program, auxiliary and two user defined sources for monitoring
- 6 GPI inputs and 9 GPI outputs on back of surface
- 12 user-configurable softkeys
